

Interwire 2017 Booth Description

Fine International will be exhibiting at the Interwire 2017 exposition in Booth 451. Technical personnel will be available to provide literature and technical information regarding our machinery line and our raw material product offerings. The machinery line includes wire handling equipment, extrusion equipment, vertical and horizontal braiders, vertical and horizontal taping equipment, inductive (contact and non-contact) preheaters, turnkey optical fiber manufacturing and custom machinery.

Fine International has recently launched a series of economical crossheads designed for single layer, skin ó foam dual layer and skin-foam-skin triple layer extrusion applications. A series of low cost extrusion screws targeted for replacement projects compliments the newly offered crosshead line.

Lastly, our raw material products includes a broad offering of shielding tapes and separating tapes available in both traditional pad packaging and extended length jumbo traverse rolls.
